

New World Camelid Service Pricing Guide

Pet Blood Bank UK is proud to support New World Camelid Blood Collection with a Collection Kit and Processing Service.

- Provision of Collection Kit – blood weighing scales, line stripper, transport box and temperature monitor.
- Consumables for collection – blood bags, clamps, consent forms and donation record.
- Courier to collect and return whole blood and collection kit to PBBUK Processing Centre.
- Processing of whole blood into plasma and packed red blood cells.
- Delivery of products overnight or same day service to practice.

Pricing

- Standard Collection Kit – Includes blood weighing scales, line stripper, transport box and temperature monitor. This kit can either be delivered to you or you are welcome to collect it from PBB. Courier costs vary depending on volume of equipment required. Please note any items returned broken or damaged will be charged for to replace / repair.
- Consumables
 - Collection bags – Quad collection bags allow for the processing of blood within a closed system and can produce 2 units of plasma for every whole blood unit collected, giving a storage life of 5 years if collection has been carried out cleanly. PBB will supply two collection bags per unit to be collected to ensure there is a spare if needed.
 - Red Clamps – Permanent clamps seal the collection line to prevent contamination after blood unit collection. Please note the tying of a knot in the collection line is not sufficient to seal a collection bag from contamination. PBB will supply two clamps per unit to be collected to ensure there is a spare if needed.
 - A clear polythene zip lock bag will be provided for each collected blood unit to allow the blood unit to be sealed within it once the line has been stripped and red clamp secured to ensure the bags remain clean.
 - Consent Forms and Donation Record Forms – PBBUK keeps a record of all donors that donate blood to allow for complete traceability (hardcopy and electronically). A consent form and donation records are provided as sets of paperwork. Completed forms should be returned for PBB to take a photocopy for our records and the originals will be returned to the practice.

NB Unused and returned equipment will not be charged for if returned clean and unopened.

New World Camelid Service Pricing Guide

- Courier service can be arranged for you – Same day service is required for the delivery of collected whole blood to ensure it reaches PBB within as short a time period as possible post-collection. As a guide the cost is £1/mile from your location to PBB at LE11 3GE (a quote can be provided at the time of booking) or you are welcome to deliver blood and equipment directly to PBB.

- Processing of Camelid Whole Blood - our processing team will process each 450ml whole blood unit supplied into one unit of packed red blood cells approx. 250ml and two units of plasma, typically 150ml in volume each depending on the animal's PCV. Plasma is dispatched to your practice on a day that is convenient to allow you to store at your premises or arrange for your clients to collect from you directly. Packed red blood cells are held at PBB until they are either required by you or they expire, in which case they are disposed of as clinical waste. Data sheets accompany all products supplied.
 - Set up and process up to first 5 units of whole blood
 - Additional units to process - price per whole blood unit

- Quality /Blood Screening is recommended in an event where the collected blood may have been contaminated; this may be due to multiple needle placements or reinsertion of a needle due to the animal moving during donation. PBB always recommends that in order to ensure products are safe to be stored for long periods of time, up to 5 years in the case of plasma that microbiology screening is performed to ensure no contamination has occurred. Please notify PBB of any breaches during collection, whole blood units are processed as normal and held until clear results are received approx. 7 days later.
 - Microbiology - charged at standard external lab fee

- Courier of blood products to your practice can either be on an overnight or same day service. Two units of plasma can be placed in each temperature controlled box to ensure it remains frozen during transportation.
 - Temperature controlled packaging per two units
 - Courier fee – Same Day Service / Overnight Service - quote provided at time of booking.
